Mark Wahlberg is a proud Boy Scout and has been showing off his talents in the field. Recently the actor was presented with the Distinguished Eagle Scout Award by his local scouting organization, Wahlberg is the first and only actor to ever be so honored. The award was given to Wahlberg on October 6th at a ceremony held at the Eagle Scout Hall in Westford, Massachusetts. Some of the duties that Wahlberg performed while a Boy Scout include hiking to some of the highest peaks in New England, helping clean up Hurricane Sandy damage in New York City, and saving a drowning man in Boston's Charles River. In a post on Facebook announcing the event, Wahlberg wrote "This is a complete honor, not just for me but for the great scouting spirit and values I learned." He added, "Being recognized as the only actor ever to be given this award is a HUGE honor." It's a pretty impressive list of duties for a 13 year old. Although the majority of Wahlberg's achievements were in Boy Scouts, he eventually transferred to a newer organization, the Girl Scouts, for his Girl Scout Council. Cotton pom-pom: the petal of a cotton house flower, recorded from the Mediterranean area and ranging from western France to North Africa. The cotton pom-pom (*Glossogyne tenuifolia*) is a house flower from the Mediterranean basin that could be introduced into North America. In order to better understand its possible invasion potential, we present comprehensive morphological and molecular characterization of populations collected from different locations of the Mediterranean area. Morphological variation is related to the geographic origin of the plant, as well as to the time at which the flowers were collected. The ploidy level of some populations was investigated by meiotic chromosome counts. Molecular analysis using RAPD, ISSR and SSR markers revealed considerable genetic variation among some species, suggesting the existence of yet undescribed species in Morocco, Algeria and Tunisia, as well as the presence of a new hybrid. The existence of populations from other areas of the Mediterranean basin (e.g. eastern Algeria) is also suggested. a to 12:10c (October 21, 2014) [message repeated on Sep 16 from Calbeth]: We're also planning to investigate support for strict ANSI compliance in the future. This came as a bit of a surprise, but

A major cause of auto-immune diseases is development of auto-antibodies against self-antigens. The general approach in auto-immunity research is to identify self-antigens (i.e. those molecules that are not typically present in tissues or secreted by cells of the immune system). In the case of autoimmune hepatitis (a.k.a. primary biliary cirrhosis or PBC), a disease characterized by a chronic inflammation of the liver, a particular self-antigen has been identified as the 60 kD heat shock protein (hsp60). In search of other auto-antigens, we showed that LPS-activated human monocytes can be used to identify auto-antigens as molecules associated with the plasma membrane fraction. Protein products of five genes were identified as membrane-associated proteins. Two of these are members of the myeloid stimulating growth factor (MGF) family that can regulate myeloid cell growth and differentiation. Reactive auto-antibodies and T cells against these myeloid growth factors have been reported in the serum of patients with rheumatoid arthritis. The observations that B and T cell clones recognizing a myeloid growth factor could be isolated from a patient with multiple myeloma were also in support of a myeloid growth factor in that patient. The studies of myeloid growth factors in autoimmune diseases are currently focused on identification of the auto-antigenic determinants and characterization of the auto-antibody and T cell repertoire of the autoimmune disease.[Respiratory function and lung volume during post-extrasystematic stabilization in patients with hypertension]. The authors present data on the comparative study of state of resistance and lung volumes in a course of post-extrasystematic stabilization of patients with essential hypertension. These patients are characterized by depression of reserves of the cardiorespiratory system, normal lung volumes and marked alterations in the character of pulse blood oxygen pressure variations. The analysis of phase responses characterizing cardiac, stroke and total peripheral resistance revealed that a large fraction of patients was characterized by an abnormal character of the process in the central hemisphere.
